Кроме того, в этой статье делается попытка показать, насколько эффективны различные интернет-источники, а также интерактивные методы в изучении и преподавании языков. Кроме того, несомненно, что интернет может быть одним из наиболее важных источников для всестороннего обучения языкам, а именно: чтения, письма, разговорной речи и аудирования.

Ключевые слова: инновации, роль инновационных технологий и современных методов в преподавании/изучении языков, услуги социальных сетей и мессенджеров, широкий спектр интернет-ресурсов.

"Innovation means future. If we begin building our great future from today, we ought to start it precisely based on innovative point of views, innovative methods during the forthcoming years" [1].

Nowadays, innovation is becoming one of the most pivotal part of human being's life. Namely, innovation is the process of updating any fields of human life which intends to make everything more convenient as well as easier for mankind. Since the beginning of XX century, people's horizon has entirely altered, besides, it has brought a series of news into our lives, for instance, the internet, gadgets, computers, smartphones, information technologies etc. Especially, internet is our aid in each work. Owing to the fact that it is universally utilized among distinctive aged ones for various aims.

Moreover, it can be widely accepted that for the time being net amenities our life and consolidates our communicative situation with relatives and friends and so on. The for of the Internet along with an innovative technology in our life make new facilities in order to learn the language. By comparison of language learning in the past, we can see massive difference. Hence, modern technologies' role in educating and learning language gets more inevitable and vital. Lesson materials (authentic materials, handouts, audio-visual images, a great deal of pictures, tasks) are searched and prepared from the internet by teachers. Due to the fact that new day's language learner is more intelligent and more rigorous than in the past. Perhaps it is complex to attract their attention from the topic with ordinary handwritten tasks which are tedious, also the lesson could be dull. Thus, teachers distribute to internet sources within new interactive technologies. Like another example of this, there are variety of net programs, websites in the internet. Since, majority of the internet competition is English, teachers of English find out a wide range of genuine resources relating to the whole spheres of life at nearly free.

Nowadays, there are lots of websites exist in the internet, such as Google Plus, Yandex, Whats App, Youtube, Google Chrome, Facebook and so on. Most teachers around the world use above homepages so as to take much more crucial and beneficial information which depends on their subject or theme. Efficacious materials enhance language learners' consciousness about the language and create a facilitate to them. At present everybody perceive how to utilize internet easily; What boon to teachers get? Teachers attempt to integrate language teaching into the social networking. For example, they make some questions which refer to the internet in English language, namely

"What is your idea of the Internet Blog?", "How is the internet changed your life?", "What is your opinion of Facebook?", "Is the Internet fascinating?" or they may write an essay which is based on below topics [2].

The appropriation of working Internet is essential anywhere. Besides that, teachers apply several manners of language teaching process. They download some music within lyrics in a song. In many cases, above methods are extremely effective to take learners concentration into the theme musically. After being listened the song, teacher should persuade students to discuss or debate on asking some questions, that is to say "What is the purpose of listening to the music?", "What is the principal idea of this music?", "How can impact on our teaching process?" and something like these. As we know that listening is a foundation of speaking. Whilst teachers are expressing their views accurately, it is not enough for language learners. That is why they mostly use tracks and audio-aids on the net. It is undoubtedly true that Internet is boon thing to practice some complicated assignments. On the ground of the above mentioned, it can be universally claimed that the Internet can bring important and positive profits to the process of learning and teaching a foreign language with students at classes. Even though the number of language learners is youth, adults also try to learn English autonomously. Therefore, teacher ought to create intensive educating ways in that field. He/She explores new approaches of teaching language as well as addresses to the internet. As we find out that English language is mainly composed of four abilities: reading, writing, speaking and listening. So as to effectively arrange the lesson, most language teachers upload their video materials on the internet. Such form of teaching process is devoted to improve learners' comprehensive English language [3].

Additionally, there are many programs on the net so as to help either learners or teachers to understand English language. An excellent example of this, the programs "Hello Talk", "Plus Babel", "Hot potato". "Hello Talk" is very helpful to elaborate learners' conversational skills by talking face-to-face with native speakers in a foreign language all over the world. It is a truly flexible, self - designed language exchange. Language learners have complete control over what they talk about and what they focus on in their studies. It is a great way for learners to start seeing how native speakers use their target language in a learning -focused environment. Apart from "Hello Talk" program, "Babel", which is the interactive online platform, gives language learners short lessons that are also designed to target learners' conversational abilities. There are lessons tailored not only to learners' interests, but also to the native language learners are coming from. Also, Babel is very convenient to thoroughly utilize, namely Babel has browser and app platforms that automatically synchronize, so language learners will never have to worry about losing their progress. If working with a flexible and dynamic platform that was created with interactive, innovative language learning in mind sounds like something that learners could benefit from it, language learner ought to definitely check out Babel. "Hot potato" program includes some parts, such as making the sentences, fill in the gaps in English, puzzles in English and so on. It is undeniably true that the hours given to educating and learning foreign languages are not enough to achieve the aim for both teachers and learners [4].

Taking into consideration above problem the applying social networking services and messengers into teaching and learning foreign languages process is one of the most inevitable solutions to come across the below mentioned issue. What is more, there are plenty English learners who is organizing to get and pass IELTS examinations, in that case IELTS video lessons, for example, speaking and writing lessons are vital for them and does not cost much. During the process of teaching English e-dictionary is one of the facilitator about learning language. Language teachers can address to the net so as to take priceless dictionary and it is also profit for their students. Language teachers send and receive e-mails from students, so it also consolidates their English language. Taking everything mentioned above, it can be concluded that the teacher should be skilful and experienced at not only teaching foreign languages, but also arranging the connection between the lessons and the internet sources almost professionally. The reason for this is that up-to-date methods of using internet in teaching language are distinctive as well as effective [5].
