**Аннотация:** в статье рассматриваются сущность и значение формирования инновационных стратегий на промышленных предприятиях в контексте модернизации национальной экономики. Также было отмечено о государственной поддержке формирования инновационной стратегии в Узбекистане. Инновация - это объект, который применяется к производственному процессу на основе научных исследований или открытий, который отличается от своего предшественника. Термин «инновации» применяется к любой новинке, введенной в экономической, организационной, финансовой и других областях, что помогает обеспечить экономическую и организационную экономию.

**Ключевые слова:** инновация, научное исследование, открытие, наука, инновационные технологии, стратегия, инновационная идея.

An important condition for the rapid development of the Republic of Uzbekistan is the rapid introduction of modern innovative technologies in the economy, social and other spheres with the widespread use of scientific and technical achievements.

According to a wise man named Alphonse Carr, "You have to work to make a living. But to get rich, you have to think of something else." That is, if you agree to live in this world as an average person, work and occupy a profession like ordinary people and earn a living for your labor. If you have the desire to live richly, learn to think and strive to develop your ability to invent new, unconventional things. Such human efforts are manifested in the "innovative image of man".

The rapid development of all spheres of society and state life requires the implementation of reforms based on modern innovative ideas, developments and technologies that will ensure rapid and quality progress of our country on the path to becoming a leader of world civilization. At the same time, the analysis showed that the work on modernization, diversification of production, increasing its volume and expanding the range of competitive products in domestic and foreign markets is not carried out properly.

In particular, due to the lack of many indicators and the lack of effective coordination of work, our country does not participate in the ranking of the Global Innovation Index, which in recent years has been compiled by authoritative and reputable international organizations.

The low level of interaction between the economic and social sectors with scientific institutions, the lack of coordination of ministries and departments, as well as local authorities in the field of innovative development do not allow to achieve the primary goals and objectives in this area.

In order to ensure the consistent development of the country on the basis of modern achievements of world science, innovative ideas, developments and technologies, as well as the consistent implementation of the tasks

set out in the Action Strategy for the five priority areas of development of the Republic of Uzbekistan in 2017-2021 The Decree "On approval of the Strategy of innovative development of the Republic of Uzbekistan for 2019-2021" was adopted. In accordance with this Decree, the target indicators of innovative development of the Republic of Uzbekistan until 2030 were approved. The main goal of this Innovative Development Strategy has been the development of human capital as a key factor in determining the level of competitiveness and innovative development of the country in the international arena. At the same time, the main objectives of the Innovation Development Strategy to achieve this main goal are:

➤ To make the Republic of Uzbekistan one of the 50 leading countries in the world by 2030 according to the Global Innovation Index;

➤ Improving the quality and coverage of education at all levels, developing a system of continuing education, ensuring the flexibility of the training system to the needs of the economy;

➤ Creation of effective mechanisms for the integration of education, science and entrepreneurship to strengthen the scientific potential and increase the efficiency of research and development, the widespread introduction of the results of research, development and technology;

➤ Strengthening the introduction of public and private funds for innovation, research, development and technology, the introduction of modern and effective forms of financing activities in these areas;

➤ Improving the efficiency of public authorities through the introduction of modern management methods and tools;

➤ Ensuring the protection of property rights, the creation of competitive markets and equal conditions for doing business, the development of public-private partnerships;

➤ Creation of sustainable socio-economic infrastructure.

The economic and social role of the state in modern society determines the functions of government agencies to regulate innovation. The most important of these are:

1) Fundraising for research and innovation.

2) Coordination of innovation activities.

3) Encourage innovation.

4) Creating a legal framework for innovation processes.

5) Staffing of innovations.

6) Formation of scientific and innovation infrastructure.

7) Institutional support of innovation processes.

8) Regulation of social and environmental orientation of innovations.

9) Raising the social status of innovation activities.

10) Regional regulation of innovation processes.

11) Regulation of international aspects of innovation processes.
